# Kenco Engineering Parts For Double Barrel Drums

## Clean-out Tips

Tungsten-carbide impregnated tip insures long life

Use 2 tips per row to prevent asphalt build up in the mixing chamber

## 700 BHN Tips

Unique "boss" around deeply recessed bolt hole protects the bolt head.

## Two Piece Floor

Wear plates can be replaced without breaking the slat chain

Split liners weigh half as much for easier, safer installation

## Flooring with Sides

Kenco Engineering .750" thick or greater, 700 Brinell wear plates are warranted for a service life of 5 million tons, or 8 years from date of invoice, whichever occurs first.

## V-Flights

## W-Flights

## Spiral Flights

**K-Chrome 700 Cast Drum Flights have a 5-year Guarantee!**

Conventional asphalt drum/dryer flights commonly wear thin on the backside, due to the veiling action of falling material. As soon as they fold over (or break), proper veiling profile is lost and aggregate drying efficiency becomes severely compromised. Plant productivity suffers from sharp increases in burner fuel consumption and/or reduced tons per hour output. An investment in Kenco cast flights not only guarantees longer life but pays dividends in fuel savings!

## Uni-mix Pugmill Tips
