

# MILLER WIRE WORKS, INC.

## MAX Screen Decking

All steel stringer construction: Steel top flat welded to steel vertical flat, both with holes to permit insertion of pegs on bottom of polyurethane or rubber screen modules. Ideal for long-term maintenance. Top piece can even be used to repair competitive systems using pipe spacers. One of narrowest stringers on the market enabling highest available open area in module design.

Stringers can be produced in various heights and steel thicknesses to provide exactly what is needed for each application. Bottom of stringers can be notched to match screen deck support structure when required.
